PROFESSIONAL SUMMARY

Motivated Computer Science and Engineering (Data Science) undergraduate with a strong foundation in full-stack development, AI integration, and data processing. Proficient in Python, JavaScript, React, Node.js, and FastAPI, with hands-on experience building AI-powered applications using LLM APIs (Gemini). Competitive programmer with 100+ LeetCode problems solved and a top-20 finish among 400+ teams in a national college-level hackathon. Passionate about leveraging machine learning and generative AI to build real-world solutions.

EDUCATION

B.Tech – Computer Science and Engineering (Data Science) | ABES Engineering College, AKTU

Sept 2024 – July 2028 (Expected) | CGPA: 8.95 / 10 (First Year, 2024-25)

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Probability & Statistics

Senior Secondary – Class XII, CBSE | DAV Public School

2024 | 90.4%

Secondary – Class X, CBSE | DAV Public School

2022 | 97.5%

EXPERIENCE

Generative AI Intern | IBM PBEL Virtual Industry Program

July 2025 – Aug 2025 | Remote

- Designed and implemented end-to-end data processing and inference pipelines for structured inputs using Python and generative AI workflows.
- Applied core ML techniques including data preprocessing, feature handling, and model evaluation to deliver actionable outputs.
- Gained applied exposure to generative AI through practical problem-solving in a virtual industry environment.

PROJECTS

AI Research Agent | Python, NLP, Web Scraping

Oct 2025 | GitHub | Live Demo

- Engineered an AI-powered research assistant that automates web search, content extraction, and text summarization, significantly improving research efficiency.
- Implemented source ranking and filtering algorithms to surface the top 5 most relevant results from large web datasets.
- Developed automated summarization workflows to enhance information accessibility for end users.

Nano-Nanny – AI Post-Discharge Monitoring System | MERN Stack, Gemini API

April 2026 | GitHub | Live Demo

- Built a full-stack AI-powered healthcare platform for post-discharge patient monitoring and real-time symptom tracking using the MERN stack.
- Integrated Gemini API to deliver contextual health insights and enable intelligent AI-assisted patient interaction.
- Developed patient report management and real-time monitoring features to improve continuity of care for discharged patients.

TECHNICAL SKILLS

Programming Languages: C, C++, Python, JavaScript

Frontend Development: HTML5, CSS3, React

Backend Development: Node.js, FastAPI

AI & Machine Learning: LLM API Integration (Gemini), Prompt Engineering, NLP Fundamentals, Data Preprocessing

Tools & Platforms: Git, GitHub, MongoDB

ACHIEVEMENTS & EXTRACURRICULARS

- HCL-GUVI Hackathon – Top 20 of 400+ Teams:** Ranked among the top 20 teams out of 400+ participants at the HCL-GUVI College Level Hackathon (Oct 2025).
- Competitive Programming:** Solved 100+ problems on LeetCode; actively participates in rated contests.
